

Melitta® Cafina® XT180

For fresh filter coffee in the XT design.

Melitta Professional
Coffee Solutions

THE FILTER COFFEE SENSATION

Is it making a come-back? Well it never really went away. But now it is no longer hiding away: Look! Filter coffee in the same design as our new generation of automatic coffee machines. The perfect match and addition to the range.

Refined aluminium side walls (anodised and shot blasted), robust touch display made of high-strength polycarbonate, ABS filter unit (dishwasher safe), painted stainless steel front: The **Melitta® Cafina® XT180** reveals itself with an elegant profile, which looks appealing to hosts and guests and brings the coffee experience to life. With or without water supply connection, with glass jug (1.8 litres/15 cups) or insulated jug (1.9 - 2.2 litres), brews up to 125 cups of fresh filter coffee per hour.

CLEVER COMFORT

What is important to the filter coffee professional? We have reviewed our classic, the M 170, and completely redeveloped it. Many useful functions make the Melitta® Cafina® XT180 a real eye-catcher with some clear advantages.

ABSOLUTE CLARITY

It's fun to use: the robust **touch display** made of high-strength polycarbonate combines all functions – easy to understand with illuminated symbols (LCD operator panel, LED signals).

QUANTITY SELECTION

Full jug: 15 cups! Here you can choose your quantities (only with water supply connection) and check the filling level.

BRING ON THE WATER!

You choose: fill manually or automatically via a **water supply connection**.

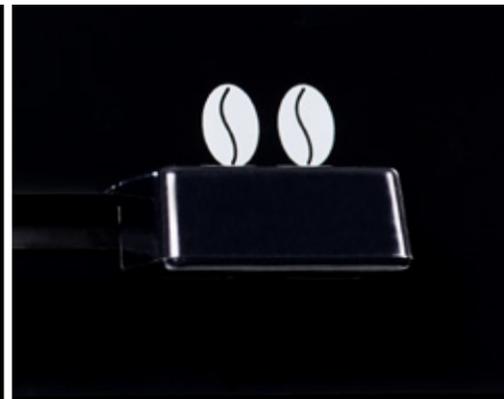

STOP AND GO!

Jug in, jug out: the **jug detector** automatically stops and interrupts the brewing process. The **drip stop** shuts and opens the filter outlet.

PROGRAMME TO TASTE

The programme button offers more options: you can **pre-brew** the coffee first – so the ground coffee can swell up – releasing a more intense aroma at the end. And you can set the **heating period**. When this has expired, the machine automatically switches to stand-by mode, saving electricity.

MILD OR STRONG?

How strong do you want your coffee to taste? The patented **AromaSelector®** allows you to vary the strength. This changes the flow of water and therefore the amount of time it is in contact with the coffee grounds.

NO CHANCE OF LIMESCALE

If the display lights up in red, too much limescale has built up. Fill with at least 5 cups of descaling solution and press the red display - the **descaling programme** will begin!

SAVE ELECTRICITY

Eco Switch: the O-watt switch also turns off the illuminated display.

LISTEN UP

If you wish, you can have something to listen to: the Melitta® Cafina® XT180 emits **acoustic signals**, for example when the maximum water quantity has been filled or the brewing has finished or been interrupted.

READY FOR EVERYTHING

Nobody needs to wait when it's all happening at once: Thanks to a second hotplate on top, the **Melitta® Cafina® XT180** is already brewing the next jug whilst you serve yourself from the one on top.

PERFECT COFFEE QUALITY

Thanks to the classic filter system with Melitta® filter paper and pyramid filter or basket filter. Guaranteeing the best development of aroma, even for small quantities.
